## Bracket Pair Color DLW

A VS Code extension that gives you a simple command to quickly toggle the global "Bracket Pair Color DLW" setting added in VS Code v1.60.

### How to run

- Press `Ctrl + Shift + P` (Win, Linux) / `Cmd + Shift + P` (Mac) and search for the `Toggle "Bracket Color DLW"` command.

### Important

The extension only toggles the **global** "Bracket Pair Color DLW" setting. If you have set the setting in your workspace, the extension will not work.

### Why creating the extension?

A fun little project. Everyone needs one of those once in a while 😊

## Indent-Rainbow

A simple extension to make indentation more readable

If you use this plugin a lot, please consider a donation:

[Buy me a coffee](#)

[Donate](#)

This extension colorizes the indentation in front of your text, alternating four different colors on each step. Some may find it helpful in writing code for Python, Nim, Yaml, and probably even filetypes that are not indentation dependent.

Note: This will also work with vscode-web (github.dev) since version 8.0.0.

```
1 import nimbench
2
3 bench(str, m):
4   for n in 0..m:
5     var dest ="apple"
6     while(dest.len<100):
7       dest+= " "
8       bench(str, m)
9   
```
